

Jack Wu

Software Engineer · Python backend, data pipelines, and React front ends

contact@JackWu.ca · (716) 305-8819

EXPERIENCE

Software Engineer · Thomson School District

May 2023 – Jun 2026

- Built the two-way Python ETL between the district information system and third-party platforms — vendor data in, exports out.
- Designed and shipped the in-house tools hub end to end — React on Django/Gunicorn behind Nginx, in Docker Compose to run on any VM.
- Built the district-wide device check-in/check-out system from scratch, plus role-restricted staff access on the ticketing system (React, TypeScript, Next.js).
- Adopted fully agentic coding day to day — MCP servers, connectors, prompt harnessing, cross-model delegation — treating its output as a draft, not an answer.

Data Engineer · Horizon Health Alliance

Oct 2022 – Jan 2023

- Built the Python ETL pipelines and scheduled upserts that kept a clinical database current, and the REST APIs that gave controlled access to it.
- Automated reporting with SQL functions and views across interconnected clinical tables, surfaced in Tableau.

Software Engineer · FliteX (Plan de Vol International)

Dec 2021 – Mar 2022

- Shipped a modified A* accounting for the curvature of the Earth to optimize flight routes (Python).

SKILLS

Languages	Python · TypeScript · SQL · Bash
Backend & Data	Django · Gunicorn · REST APIs · ETL & data integration · SQL functions & views · Tableau
Frontend & Infra	React · Next.js · Docker Compose · Nginx · cron
AI Engineering	agentic coding · MCP servers · connectors · prompt harnessing · model delegation · Gemini API

EDUCATION

York University · B.S. Computer Science

2020 · Toronto
